Easy to use!

Besides the easy-to-use display, the Cap press is equipped with a Magnetic auto-open system. Once the transfer time has passed, the press will automatically open.

This feature is particularly interesting for production as the operator does not have to run towards the press once the transfer time is completed.

Heat elements

The Calortrans CT-C50M is equipped with a Teflon coated aluminum heat element, making sure the temperature remains constant. A huge advantage for multiple cap transfers.

Use the 15 x 15 cm heat element to press small designs such as chest logos on t-shirts and polos.
